

environmental control unit

Client: **TREND**

- Product styling suitable for world markets
- Integration with client electronics team
- Designed for high volume manufacture
- Product consistency between modules

Brief:

Trend Controls, a Novar Group Company, commissioned SA to design the external housing for their latest range of environmental control units for use in a range of building types.

Solution:

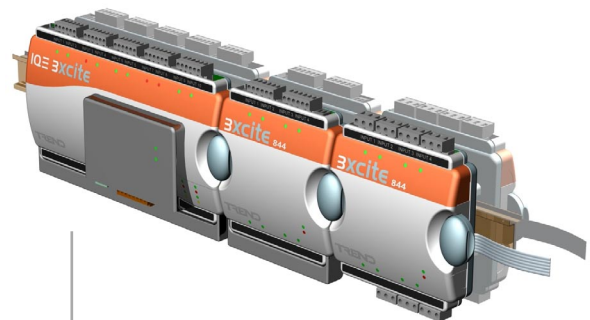

Using the latest 3D CAD technology, many aesthetic variants were produced. Because of the fixed footprint of the internal components each variant could be checked to ensure the correct fit and feasibility.

Result:

Sadler Associates solution, as shown in the illustrations, has proven to be highly successful providing Trend with an exciting new design that attracts instant attention in an industry of understated grey boxes.
