

## infant audio test unit

Client: **SLE**

- Low cost cast PU production
- Close work with client electronic teams
- Cross range consistency
- Multiple environment operation.

### Brief:

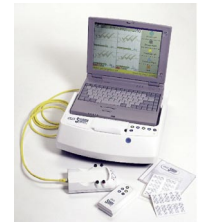

SLE are a UK manufacturer of diagnostic and life support equipment. Following SA's work on their portable 'Sabre' unit (shown top right), the practice was asked to work on the new compact version.

### Solution:

Working closely with the electronics team to house the components, SA developed a design which is ergonomically suitable for both hand-held and desk mounted operation. The design was produced from cast PU, which allowed for low investment costs for SLE, whilst still producing a high quality product.

### Result:

Both the 'Sabre' and 'Sabre Compac' products have been successfully launched by SLE and have received high praise from user groups.
