

spirometer

Client:  Micro Medical

- Award winning medical design
- Low cost mass produced design
- Compact, portable unit
- User-centred operation

Brief:

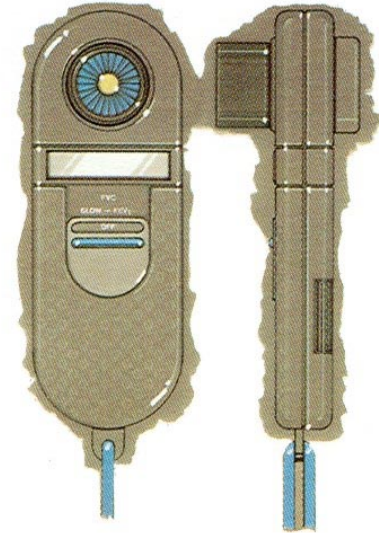

Micro Medical are a world leading producer of pulmonary function equipment and asked SA to design a low cost unit for use by doctors, nurses and patients.

Solution:

The solution focused on making the unit small and easy to handle, with much of the research going into ergonomics. The central display and interface makes for easy operation, while the simple moulded clam-shell case facilitates low cost construction.

Result:

The product, which was the subject of a design award for Sadler Associates, has proved to be a very successful product for Micro Medical. It has been a high selling unit that has retained its place in the market for many years. Its use has been extended to such groups as athletes at the Olympics, mountaineers and explorers.
