

side facing instructor's operating system

Client: **THALES**

- Full size prototyping
- Mechanical and structural design
- Working along side clients R&D team
- Short four month programme time
- Cost reduction of 30% over previous unit

Brief:

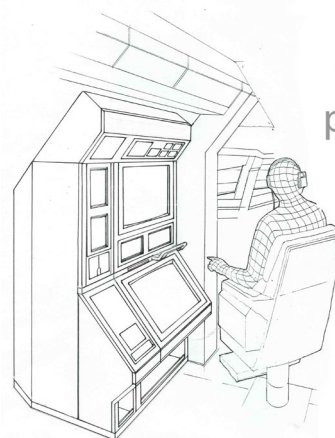

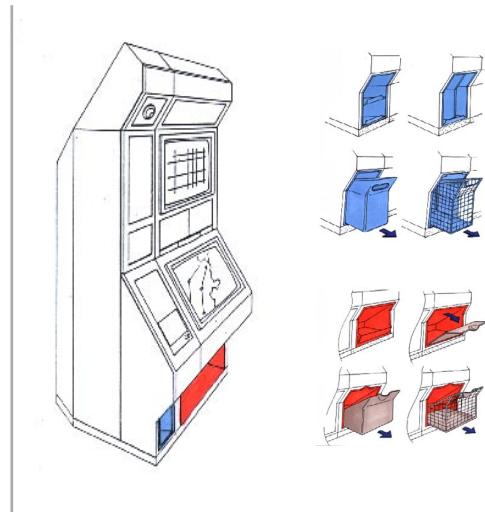

Thales Training & Simulation (formerly Thomson T&S) is a leading supplier of pilot training simulators for military and civil aviators. SA was engaged in the design and development of the side facing instructors console, with the aim to maximise specification options at a reduced purchase price.

Solution:

SA worked along side the clients R&D team to design and develop the mechanical and ergonomic aspects of the unit, along with the products visual 'packaging'. SA were able to encompass a number of new features and meet all the clients critical objectives and oversee production within four months (from start to finish).

Result:

The final solution offered the client a number of competitive advantages over competitors, allowing them to successfully market the product to a number of new airline clients. SA's solution allowed the unit to be easily customised to each airline's specification.
